

Entomology and Acarology.

→ Greek words.

↳ Entoma means insects.

↳ Study of insects having 3 pair of legs.

↳ Acar means Acarines.

* ↳ Study of acarines and have ~~multiple~~ 4 pairs of legs.

↳ Ticks, mites, scorpion etc.

→ Belong to phylum Arthropoda.

↳ Arthropos → jointed.

↳ Podos → legs.

→ Arthropoda covers insect and acarines with jointed legs.

↳ 80% of insects.

→ Class insects

↳ Orders: Diptera

of importance siphonaptera.

Hemiptera.

Phthiraptera.

→ Diptera → Flies, mosquitoes

→ siphonaptera → Fleas.

→ Hemiptera → Bugs.

→ Phthiraptera → Lice

- Theileriosis is carried by *Hyalomma Annulatum*.
- Babesiosis is caused by *Babesia microti*.
- Trypanosomiasis caused by sand fly.
- Leishmaniasis caused by Tsetse fly.
- Congo caused by *Hyalomma marginatum*.
- Insects and acarines act as mechanical or biological vectors.

- Elephantiasis (legs swell like elephants) is carried by mosquito (~~Eggs~~ *Wuchereria bancrofti* parasite).
 - ↳ Damage lymphatic system.

Characteristics:

- Invertebrates.
- Ectoparasites
- Body covered in chitin layer.
produced by epidermis.
- 3 parts. ~~in~~ in insects.
 - ↳ Head → Mouth, eye, antenna.
 - ↳ Thorax
 - ↳ Abdomen
- Head + Thorax fused in acarines.
 - ↳ called cephalothorax.
- Abdomen.

Date: ___/___/20___

- open circulatory system.
- Respiration occur through
- 4 sy. ft. per animal to minimize tick transfer.

Ticks.

- blood suckers.
- Cause irritation.
- Release poison/toxins.
- Allergens present in their saliva.
- Economy/production loss.

Class Arachnida

Orders: Acarines → Ticks, mites, scorpion
